DSSD CENSUS 2000 PROCEDURES AND OPERATIONS MEMORANDUM SERIES R-30

MEMORANDUM FOR Richard Blass
Assistant Division Chief, Evaluation and Coverage Measurement
Field Division

From: Donna Kostanich *DK*
Assistant Division Chief, Sampling and Estimation
Decennial Statistical Studies Division

Prepared by: Matt Salganik *MS*
Decennial Statistical Studies Division

Subject: Accuracy and Coverage Evaluation Survey: Transmittal of Estimated
Interview Workload After Large Block Cluster Subsampling

This memorandum provides information on the transmission of the Accuracy and Coverage Evaluation (A.C.E.) estimated interview workload after large block cluster subsampling. We provided this data on diskettes to Neala Stevens of your staff on March 3, 2000. **The information contained on these diskettes is confidential and protected by Title 13 of the U.S. Code. Administratively restrict access to this information to authorized A.C.E. staff.** This memorandum only documents what we provided and includes some summary information. This memorandum does not contain any confidential information.

The workload estimates were generated by calculating the number of independent list housing units in a cluster excluding units with status 'future construction'. If this total is greater than or equal to 80 it was divided by the large block cluster take-every for that cluster. These cluster-level estimates were rounded to the nearest housing unit. The rounded estimates were then summed to yield estimates at the state and A.C.E. Regional Office (ACERO) level.

As requested, we provided you with 12 Quattro Pro spreadsheets, one per ACERO, which contain a total of 11,802 clusters from the 50 states, the District of Columbia, and Puerto Rico. In these files the clusters are sorted by state. The spreadsheets contain the following variables:

- A.C.E. regional office
- FIPS state code
- County code
- Local census office
- A.C.E. cluster number & check digit
- Estimated housing unit interview workload after large block cluster subsampling

Also, please note the following features of the data:

- These numbers are estimated workloads before Housing Unit Follow-Up (HUFU) and before large block subsampling and therefore may differ from the actual interview workloads. These numbers should be used only for planning purposes.
- These numbers exclude housing units with an A.C.E. status of 'future construction'.
- Small block clusters with fewer than 10 housing units are included in these numbers.

Attachment A contains a breakdown of the expected A.C.E. interview workload by state.

Attachment B contains a breakdown of the expected A.C.E. interview workload by ACERO.

Any questions concerning these files should be directed to Matt Salganik (301-457-3636) or Jim Farber (301-457-4282).
